**Abstract of JP2001160767**

**PROBLEM TO BE SOLVED:** To miniaturize and reduce the weight of portable device by using an effective radio identification signal in radio equipment. **SOLUTION:** In an identification transmission/reception method in radio equipment provided with an interrogator 20 which radio-transmits data and a responder 3 receiving data and transmitting a response to the interrogator 20, plural radio frequencies f1, f2 and f3 and plural time slots t1, t2 and t3 being time frames, which transmit the signals, are combined and the radio identification signal is constituted. The radio identification signal is transmitted from the interrogator 20 before the transmission of data being a main signal.
